REISSWOLF security containers

All companies work with sensitive data. It is not only important to handle this data confidentially – the paper documents and electronic data media must also be archived and destroyed securely and in accordance with legal regulations.

Our job is to ensure that no one has the slightest chance of accessing your data without authorisation. This is something we take very seriously. For this reason, we apply strict security standards for every step in the destruction process.

Whether they are used to collect documents for archive disposals or for the destruction of documents that are no longer needed, all of our security containers are made of aluminium and lockable, protecting them from unauthorised access.

Depending on requirements, the security containers can hold paper documents (files, folders, etc.), X-rays, CDs, DVDs, bank cards or even hard drives.

The security containers also provide increased fire protection for paper collections in the office.

e.l.sy. – electronic locking system

e.l.sy. guarantees maximum security and supplies the ultimate in intelligent data protection for sensitive company data through locking rights issued individually, security container tracking and incident logging

Our electronic locking system e.l.sy. with built-in microprocessor protects the containers from unauthorised access and guarantees continuous monitoring

The security containers are opened by chip cards with unique ID numbers. If a card is lost, it can be deactivated at any time and simply replaced. An alarm signal makes it impossible to forget to close the security container. Furthermore, the automatic locking function ensures that the security container is locked as soon as the lid is closed.

e.l.sy. technology provides top-level security, with features that are unique when it comes to file and data destruction.

Destruction

We guarantee certified process security from the collection of your sensitive data through to the final destruction, along with strict compliance with all data protection regulations. Our large-scale shredder plants destroy roughly 190,000 tonnes of documents with personal data every year. Our destruction plants for hard drives are some of the most technologically advanced in Europe. Regardless of the particular type of data medium, the destruction is always redundant twice over. Furthermore, the entire workflow is regularly inspected by external quality managers and continuously optimised to ISO 9001:2008. Where technical conditions allow, all materials are also recycled as industrial secondary substances.

RW 70 – the compact solution

Dimensions: L 42 × W 42 × H 60 cm
Volume: 70 l, 40 kg or 10 folders
Use: compact solution for low volumes
Location: small rooms or under desk
Filling: through slot in lid

RW 240 – the all-rounder

Dimensions: L 48 × W 58 × H 101 cm
Volume: 240 l, 90 kg or 30 folders
Use: for universal application
Location: photocopying rooms, basements, computer centres, etc.
Filling: through slot in lid

RW 240S – the security specialist

Dimensions: L 48 × W 58 × H 121 cm
Volume: 240 l, 90 kg or 30 folders
Use: for universal application
Location: publicly accessible rooms
Filling: through access-proof filling lock

RW 350 – the practical assistant

Dimensions: L 90 × W 69 × H 90 cm
Volume: 350 l, 150 kg or 50 folders
Use: ground floor or for the lift
Location: mobile
Filling: through fully openable hinged lid

RW 500 – the giant

Dimensions: L 118 × W 69 × H 100 cm
Volume: 500 l, 200 kg or 70 folders
Use: generous solution for bulky paper waste
Location: ground floor or for lift transport
Filling: through fully openable hinged lid

Large-volume container – the customised solution

Dimensions: large-volume containers in varying sizes
Volume: can be scaled as required
Use: complete archive disposals or
large data stocks after data retention periods have expired
Location: delivered and collected by REISSWOLF special vehicles.
Filling: always lockable. Depending on the model, as walk-in container
or with large side openings
